# Московский государственный технический университет им. Н.Э. Баумана Кафедра «Системы обработки информации и управления»

# Лабораторная работа №3 по дисциплине «Методы машинного обучения» на тему «Обработка признаков»

Выполнил: студент группы ИУ5-21М Нищук Р. С.

# 1. Лабораторная №3

**Цель лабораторной работы:** изучение продвинутых способов предварительной обработки данных для дальнейшего формирования моделей.

#### Задание:

- 1. Выбрать один или несколько наборов данных (датасетов) для решения следующих задач. Каждая задача может быть решена на отдельном датасете, или несколько задач могут быть решены на одном датасете. Просьба не использовать датасет, на котором данная задача решалась в лекции.
- 2. Для выбранного датасета (датасетов) на основе материалов лекций решить следующие задачи:
  - 1. масштабирование признаков (не менее чем тремя способами);
  - 2. обработку выбросов для числовых признаков (по одному способу для удаления выбросов и для замены выбросов);
  - 3. обработку по крайней мере одного нестандартного признака (который не является числовым или категориальным);
  - 4. отбор признаков:
    - один метод из группы методов фильтрации (filter methods);
    - один метод из группы методов обертывания (wrapper methods);
    - один метод из группы методов вложений (embedded methods).

# 2. Описание данных

- Date Дата наблюдений
- Location Название локации, в которой расположена метеорологическая станция
- MinTemp Минимальная температура в градусах цельсия
- МахТетр Максимальная температура в градусах цельсия
- Rainfall Количество осадков, зафиксированных за день в мм
- Evaporation Так называемое "pan evaporation" класса A (мм) за 24 часа до 9 утра
- Sunshine Число солнечных часов за день
- WindGustDir направление самого сильного порыва ветра за последние 24 часа
- WindGustSpeed скорость (км / ч) самого сильного порыва ветра за последние 24 часа
- WindDir9am направление ветра в 9 утра
